

# SOA Repository Project (S-RAMP)

The S-RAMP project provides a Repository to store and manage SOA artifacts and their metadata throughout their life-cycle. The JBoss SOA repository implements the S-RAMP API.

- S-RAMP (SOA Repository And Model Protocol) is a new standard being finalized within the S-RAMP OASIS working group. S-RAMP
  - defines a common data model to facilitate the use of common tooling and sharing of data.
  - S-RAMP defines an ATOM binding for create, read, update, delete and query operations
- Governance WorkFlow for release artifacts
- Maven API integration for upload and download of release artifacts
- Integration with deployment systems (direct deployment, JON)

# Governance Architecture

# Roadmap

- Out-of-the-Box Governance WorkFlows
- One Repository Strategy (Guvnor)
- Artifact Browser & Search
- IDE Integration & Tooling support
